AC-15 Snap Action

## Limit switch types

Snap-action contact: A contact element in which the contact motion is independent of the speed of the actuator. This feature ensures reliable electrical performance even in applications involving very slow moving actuators.
Slow-make/slow-break contacts: A contact element in which the contact motion is dependent on the actuator speed.

AC-15 Slow Action

## Terminal identification (IEC)

Each terminal is marked with two digits. The first digit indicates the pole (circuit). The second digit indicates the type of contact.
_1-_2 is N.C., _3-_4 is N.O.
so $11-12,21-22$ are N.C., while 13-14, 23-24 are N.O.

Make-before-break (overlapping) SPDT: the N.O. contact closes before the N.C. contact opens. (See ex: Y11)
Break-before-make (offset) SPDT: the N.C. contact opens before the N.O. contact closes. (See ex: X11)
Simultaneous make and break SPDT: the N.C. contact opens at the same time as the N.O. contact closes. (See ex: Z11)
