Fuji Duo Series SC-E Contactors

Standard operating conditions

The magnetic contactors are manufactured for use in the standard operating conditions given in the table.

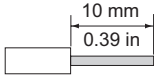

Wiring

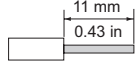

Be sure to perform wiring correctly with reference to the wiring diagrams. Main terminals for models SC-E02 to SC-E7 are wired using solid wires or stranded wires. Stranded wires or flexible stranded wires can be connected by twisting them together and crimping a sleeve (ferrule) onto them before connecting.

Tightening torque

If wires are not tightened sufficiently, they may become hot or loosen, resulting in a fire, short-circuit, electric shock, or other potentially dangerous situation. Tighten wires to the torques specified in these tables.

Standard Operating Conditions	
Ambient Temperature	Operating: -5 to 55°C [23 to 131°F] No sudden temperature changes resulting in condensation or icing (The average temperature over a 24-hour period must not exceed 35°C [95°F]) Storage: -40 to 65°C [-40 to 149°F]
Humidity	45 to 85%RH
Altitude	2000m or lower

Coil surge suppression units

SZ-Z1

SZ-Z37

Suppress surge voltage due to contactor ON-OFF operations; easily connect to contactor coil terminals.

Important: When driving 24VDC Fuji contactors with a PLC solid-state output, we recommend using diode terminal block part number DN-D10DR-A or ZL-TSD8-24. Please see application note AN-MISC-032 for additional information located on Automationdirect.com/technotes.
