## Operating Characteristics definitions:

Operating Force: Force required to cause "snap."
Release Force: Force still applied to plunger or lever when the contacts snap back from the operated position.
Pre-Travel: Distance from free position to operating position.
Over-Travel: The extra travel for the plunger or lever to travel safely beyond the operating position.
MD (Max): Maximum differential (plunger or lever travel from the point where the contacts snap to the point where they snap back).
FP (max): Extra distance relative to mounting holes that the plunger or lever travels to the snap position, including loose flex.
Operating Position: Distance relative to mounting holes that the plunger or lever travels to the snap position.
