Additional Features	Step pulse noise filter, accepts AC power input	Step pulse noise filter	Load inertia (anti-resonance & damping feature to improve motor performance)			n/a	Anti-resonance (Electronic Damping) Auto setup Microstep emulation Torque ripple smoothing (allows for fine adjustment of phase in the range 0.25 to 1.5 rps) Waveform (command signal) smoothing							

Refer to Specifications Tables for detailed specifications.

SureStep® High Bus Voltage Microstepping Drives

SureStep Series Specifications – Standard Microstepping Drives

Microstepping Drive	STP-DRVAC-24025
Price	
Drawing	PDF
Drive Type	Microstepping drive with pulse input
Output Current	Selectable from 0.6–2.5 A/phase (peak of sine)
Input Voltage	90–240 VAC
Configuration Method	Rotary dial, DIP switches, jumpers
Amplifier Type	MOSFET, dual H-bridge, 4-quadrant
Current Control	4-state PWM @ 20 kHz
Protection	Over temp, over voltage, under voltage, over current, excess regen, open circuit
Recommended Input Fusing	Fuse: 4A fast-acting; ADC #AGC4; Holder: ADC # DN-F6L110
Input Signals	<p>Input Circuit 5–24 VDC nominal (range: 4–28 VDC); optically isolated, differential.</p> <p>Step/Pulse Minimum pulse width = 1µs. Maximum pulse frequency = 150kHz or 2MHz (user selectable). FUNCTIONS: step & direction, CW/CCW step</p> <p>Direction</p> <p>Enable FUNCTION: disable motor when closed</p> <p>Analog n/a</p>
Output Signal	30 VDC / 100 mA max, optically isolated photodarlington, sinking or sourcing. Function = closes on drive fault.
Features	<p>Current Reduction n/a</p> <p>Idle Current Reduction 90% or 50% of running current. (Holding torque is reduced by the same %.)</p> <p>Microstep Resolution 200, 400, 800, 1000, 1600, 2000, 3200, 4000, 5000, 6000, 6400, 8000, 10000, 12800, 20000, 25600</p> <p>Phase Current Setting 0.6–2.5 Amps RMS</p> <p>Self Test Automatically rotates the motor back and forth two turns in each direction in order to confirm that the motor is operational.</p> <p>Step Pulse Noise Filter Select 150kHz or 2MHz</p> <p>Load Inertia Set motor and load inertia range to 0–4x or 5–10x.</p>
Connectors	DEGSON 2EDGK-7.62-02P-14-00A(H) 2-pin power connector DEGSON 2EDGK-5.08-04P-14-00A(H) 4-pin motor connector DEGSON 15EDGK-3.81-08P-14-00A(H) 8-pin I/O connector ADC part STP-CON-6 contains replacement connectors
Maximum Humidity	90% non-condensing
Storage/Ambient Temperature	0 to 40 °C [32 to 104 °F]
Operating Temperature	0 to 85 °C [32 to 185 °F] (interior of electronics section)
Drive Cooling Method	Natural convection (mount drive to metal surface)
Mounting	(2) M4 screws to mount to metal surface
Weight	1 lb 15 oz [0.88 kg]
Agency Approvals	CE, CUR _{US}

Stepping System Accessories

SureStep® Microstepping Drives Accessories

Braking Accessories

As a load rapidly decelerates from a high speed, much of the kinetic energy of that load is transferred back to the motor. This energy is then pushed back to the drive and power supply, resulting in increased system voltage. If there is enough overhauling load on the motor, the DC voltage will go above the drive and/or power supply limits. In general, the more torque the motor is capable of producing then the more energy it can push back into the drive.

When using a regulated/switching power supply, this can trip the overvoltage protection of the power supply or drive, and cause it to shut down.

To solve this problem, AutomationDirect offers a regeneration clamp as an optional accessory. The regen clamp has a built-in 50W braking resistor. The STP-DRVA-RC-050A does not have the ability to use an external resistor.

Regeneration Clamp STP-DRVA-RC-050A

Regeneration Clamp Features

STP-DRVA-RC-050A

- Built-in 50W power resistor for more continuous current handling
- Mounted on a heat sink
- Voltage range: 24–80 VDC; no user adjustments required
- Power: 50W continuous; 800W peak
- Indicators (LED):
Green = power supply voltage is present
Red = clamp is operating (usually when stepper is decelerating)
- Protection: The external power supply is internally connected to an "Input Diode" in the regen clamp that protects the power supply from high regeneration voltages. This diode protects the system from connecting the power supply in reverse. If the clamp circuit fails, the diode will continue to protect the power supply from over-voltage.
- Three drive connections, 7A max per channel, 15A total output current
- Removable terminal blocks (replacement kit STP-CON-4)
- Uses 18-20 AWG wire for connections

SureStep Damper

A step motor inertia damper can smooth out steps in a typical step motor resulting in a quieter and smoother motion when rotating between steps. Reducing the resonance and possible micro oscillations when moving from step to step is the main purpose of a "hockey puck" style damper, but it can also be used as a hand wheel to directly rotate the position of the rotor when power is removed from the motor. The damper is a properly sized machined piece of aluminum encased in plastic. It is sized and weighted for general damping of the respective frame size motor.

Damper

Sure Step Series Specifications – Microstepping Drives Optional Accessories

Part Number	Price	Description	Drawing
STP-DRVA-RC-050A*		Regen Clamp: 50W, for DC input stepper and servo drives, enclosed	PDF
STP-MTRA-17DMP		SureStep damper, metal body. For use with NEMA 17 stepper motors with 5mm shafts. Mounting set screw included.	PDF
STP-MTRA-23DMP		SureStep damper, metal body. For use with NEMA 23 stepper motors with 1/4 inch shafts. Mounting set screw included.	PDF

* Do not use the regeneration clamp in an atmosphere containing corrosive gases.

USB to RS-485 Adapter

The STP-USB485-4W is a USB to RS-232/RS-485 converter that can be used in 2-wire or 4-wire serial networks. Serial communication can be wired up via the 9-pin D-sub connector or through the 6-screw terminals.

The STP-USB485-4W can be set for several different configurations. These modes are set up by the 4 DIP switches on the outside of the case (RS-232/RS-485, full/half duplex) and by the 7 jumpers located inside the case (termination/bias resistors).

SureStep Advanced Drives communicate via RS-232 (for control and for configuration via SureMotion Pro).

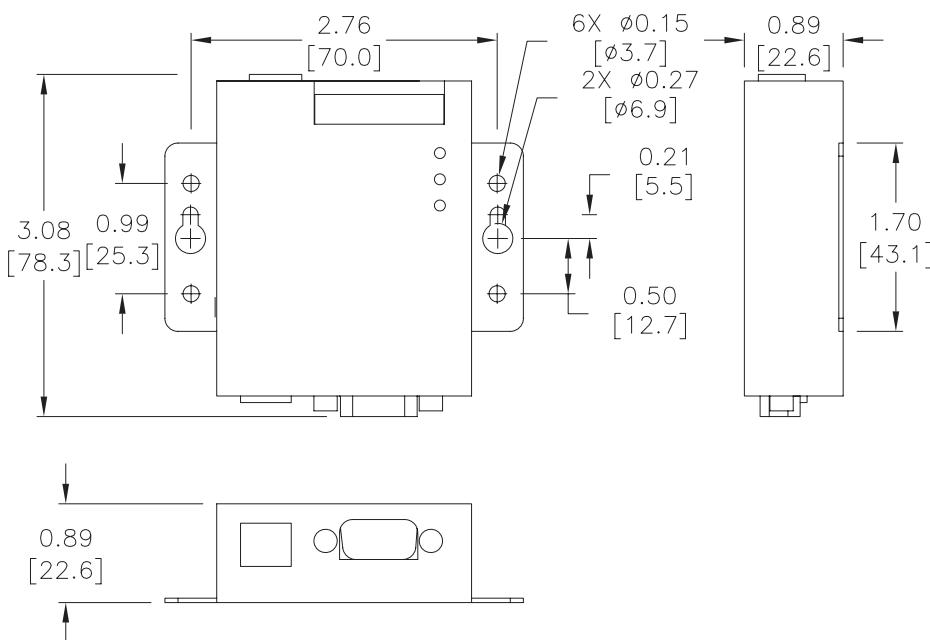

The Advanced Integrated motor/drives use RS-485. While the Advanced Integrated motor/drives can be wired for either 2- or 4-wire networks, 4-wire is required for use with SureMotion Pro due to the Firmware Download utility and the Status Monitor Screen.

Depending on the host controller's RS-485 implementation, either 2- or 4-wire RS-485 can be used for control. All RS-485 PLCs that have 2-wire capability (Productivity, BRX, Click, DirectLogic, etc.) can control the Advanced Integrated steppers.
